A Catching Offer:

The PACO Hooked Screen Range

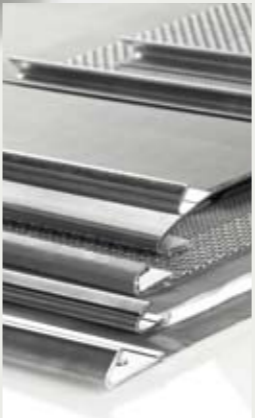

Mesholutions created by PACO

Mesholutions created by PACO

Applied Expertise for “Unknown Stars”

Hooked screens, woven wire screens, industrial screens – or whatever you like to call them – play a decisive role in the performance of screening machines, in the quality of the screening results, and in the productivity and cost-effectiveness of the screening process. Despite this they remain one of the unknown stars of screening technology: all they have to do is work properly.

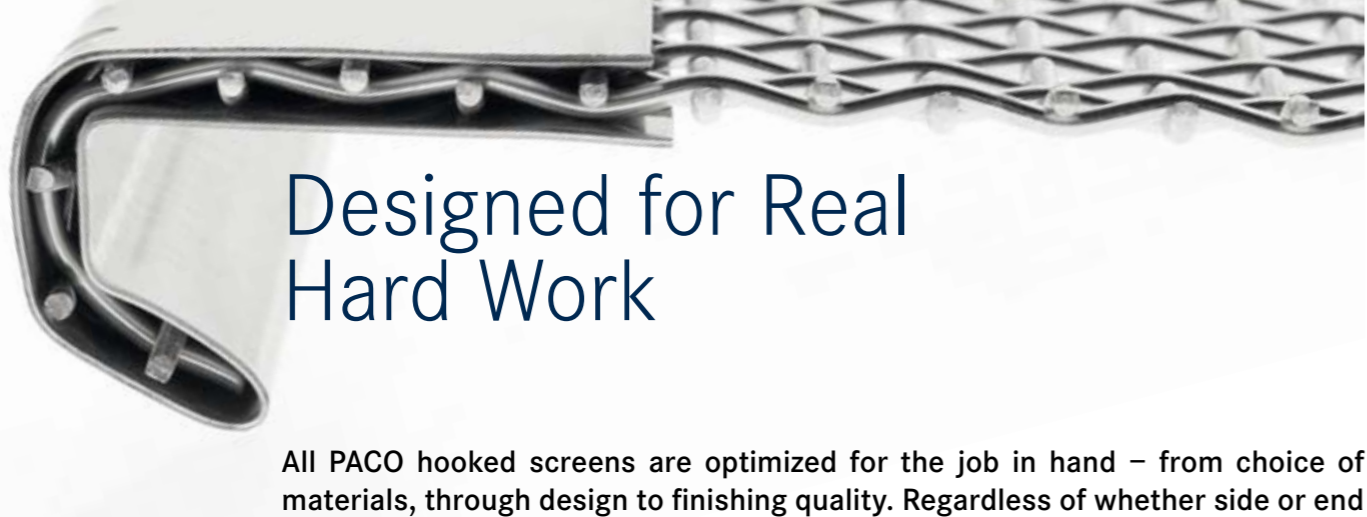

The PACO hooked screen range includes versions with various screening cloths, hook edge designs and special features.

**Success factor:
process know-how**

Every screening machine is different. Every product is effectively separated in its own particular way. And there are always specific demands on the required screening quality. That is why PACO doesn't simply rest on its knowledge about the cloths it makes, but takes a close look at the complete screening process. Tailoring to each individual screening machine, choosing the most effective cloth, knowing all about the specific screening product, and being aware of the needs and expectations of the screening machine user – this and more are all part of the total package.

**Strong bond between material
and service**

Our in-house manufactured metal wire cloth is at the heart of each PACO hooked screen. This is complemented with a job-oriented edge design, specifically chosen hook technology and special features such as rubber or silicone lip seals, re-inforcement through polyurethane film, baffles, deflectors and supporting cloths etc. All of this is specified in close cooperation with the screening machine manufacturer and/or user, and supplied by PACO from a single source – in class leading PACO quality and including PACO total service.

Designed for Real Hard Work

All PACO hooked screens are optimized for the job in hand – from choice of materials, through design to finishing quality. Regardless of whether side or end tensioned, they always provide reliable performance coupled with long lifetimes. They can be easily re-tensioned, efficiently cleaned and quickly exchanged.

For example: popular hook styles

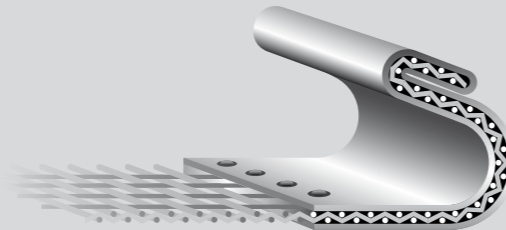

Hook B 1

Hook bent parallel.
Hook opening angle 10-20°

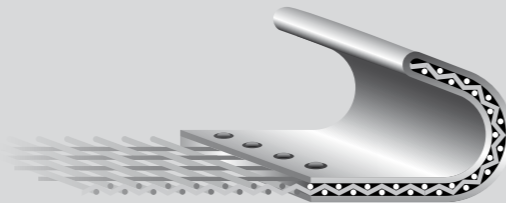

Hook B 2

For fine screens with a wire thickness of max. 0.9 mm.
Hook opening angle according to customer specifications.

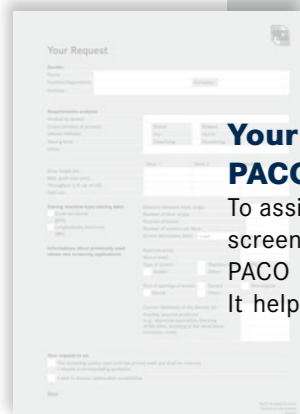

Hook B 3

Opening angle 30-40°, suitable for end and side tensioning.
Bending radius 4-6 mm. For coarse screens with a wire thickness of 2.5 mm.

Other hook types and custom versions on request.

Your own specific PACO hooked screen

To assist you with the specification of a hooked screen to your own individual requirements, PACO has developed a special request form. It helps you to clearly present your needs and

provides a practical basis for further discussions with one of our specialist engineers. You can download it and print it out from www.paco-online.com

From New Screens to Reconditioned Screens:

PACO's Comprehensive Screen Service

Screening is one of the fundamental processing technologies in almost all industries. Consequently, there is a large demand for new screens – just as there is for reconditioning and retensioning used screens. To meet these demands, PACO has ramped up its working capacities as well as its range of services.

House to house service

We will arrange to pick up your used screen and return it to you after processing. The prices for this service are very competitive and based on

distance (see PACO Screen Service Map). On the basis of the wear pattern, we can help you find the root cause of any damage or premature wear and provide assistance in optimizing your screening process.

Perfect tensioning technology

For screen tensioning, PACO uses optimized production equipment and precision measuring technology. The metal wire cloths are absolutely uniformly tensioned in all directions. This provides particularly high levels of rigidity that optimally transmit the screening vibrations and ensure increased productivity.

Round screen with up to 3000 mm diameter!

An exclusive PACO screening offer is the re-meshing of round screens with a diameter of up to 3000 mm! It goes without saying that the PACO transport service that collects and delivers such large-scale screens is also correspondingly dimensioned.

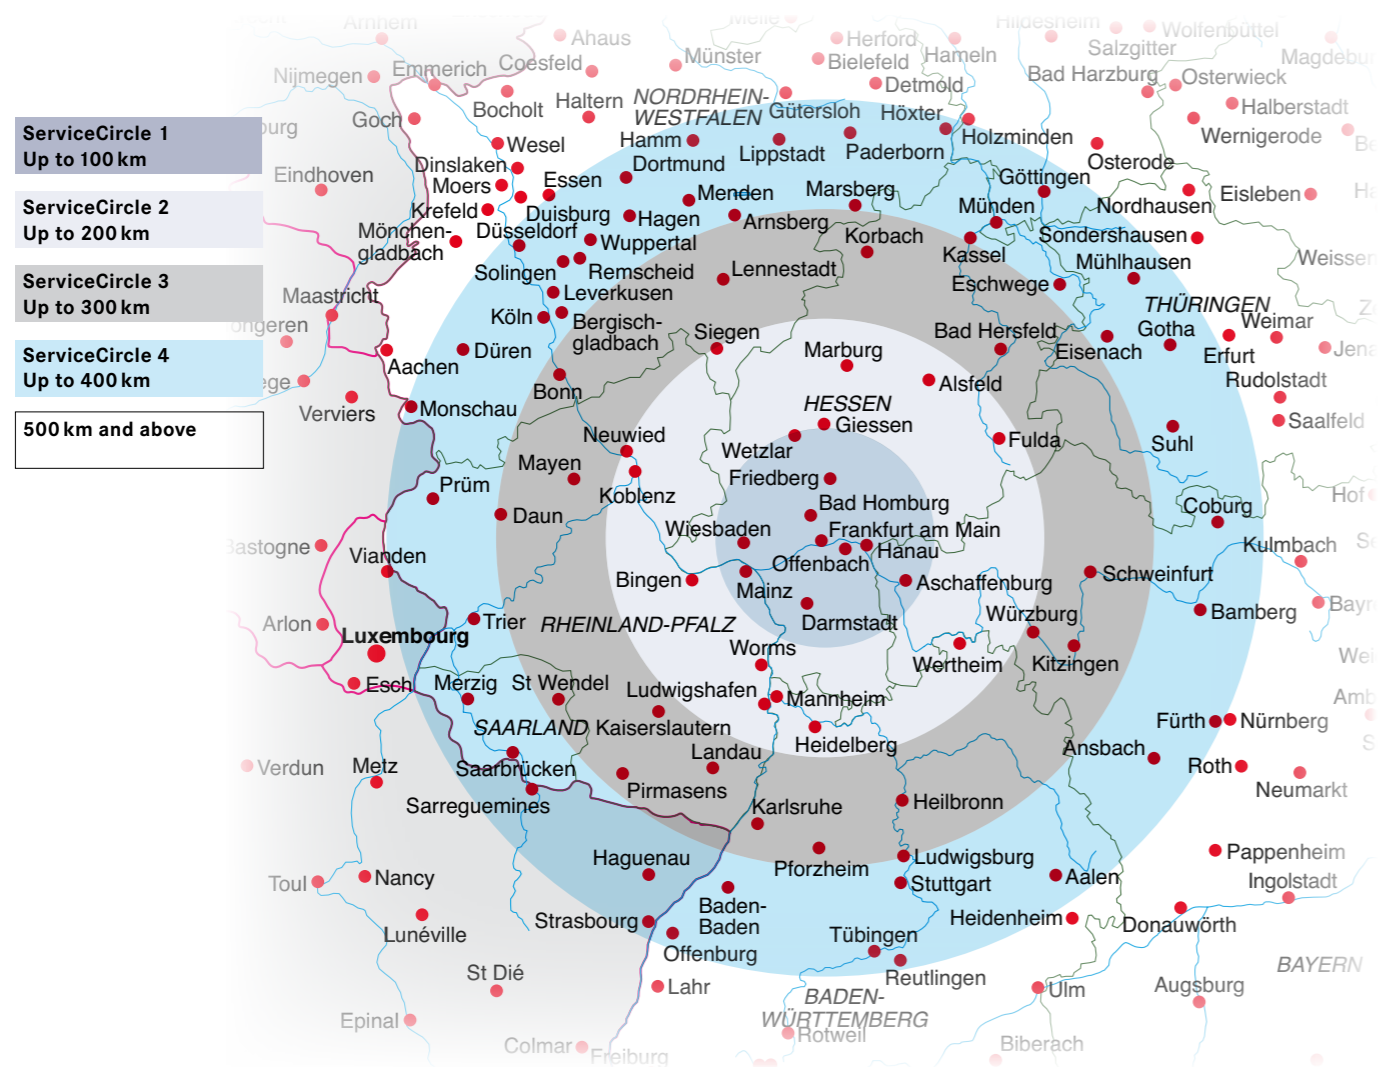

PACO Screen Service Map

For the reconditioning of used screens, PACO offers an all-round service from door to door.

The competitive prices for the collection and re-delivery of screens is based on distance. The PACO Screen Service Map shows the corresponding distance zones. We can provide you with the exact prices on request under
